On Track

Audit date: July 22, 2026

Claude Skill and Plugin by Alex Labat

Executive Summary

Maven Home Services' site at mavendmv.com has a genuinely solid on-page foundation: all 30 pages carry unique, keyword-and-locality-targeted title tags, unique meta descriptions, exactly one H1 each, clean URLs, and substantial content (1,900–2,100 words on the four service category pages). The most urgent problems are structural: robots.txt and sitemap.xml both return 404, no page declares canonical or structured data of any kind, and blog posts publish og:image URLs pointing to http://localhost:3000 — so shared links show no image on social platforms and messaging apps. The single biggest opportunity is structured data: FAQ content already exists as structured question/answer data in the codebase on every service page, so FAQPage, LocalBusiness, and Article schema can be added with minimal effort and would materially lift visibility in both classic search features and AI-powered answer engines.

Dimension	Score	Status	Key Takeaway
SEO	6/10	On Track	Strong on-page basics; missing sitemap, robots.txt, canonicals, and all schema.
GEO	5/10	Needs Work	Good NAP and certifications, but no entity schema, no named people, no social profiles.
AEO	6/10	On Track	FAQ content everywhere and question-formatted blog titles — but zero FAQPage/HowTo markup.
Combined	17/30		

Pages Audited

All 30 pages returned HTTP 200 and were fetched as raw HTML on July 22, 2026. robots.txt and sitemap.xml were also requested (both 404).

URL	Page Type	Notes
/	Homepage	1,487 words; 15 images all with alt text; testimonials, certifications, FAQ teaser
/hvac	Service category	2,055 words; FAQ section; 1 of 8 images missing alt
/plumbing	Service category	1,947 words; FAQ section; 8 service areas covered
/electrical	Service category	1,931 words; FAQ section; 9 service anchors
/commercial	Service category	1,151 words; FAQ section; lightest of the four categories
/about	About	638 words; certifications shown; no named team members

URL	Page Type	Notes
/blog	Blog index	10 posts with dates + read times; 10 of 17 images missing alt
/contact	Contact	380 words; full NAP, hours, form, map embed; mini-FAQ
/hvac/residential-commercial	Subpage	785 words; FAQ present
/hvac/air-conditioners	Subpage	811 words; FAQ present
/hvac/refrigerators	Subpage	739 words; FAQ present
/hvac/ice-makers	Subpage	741 words; FAQ present
/hvac/furnace-heating	Subpage	812 words; FAQ present
/hvac/walk-in-coolers-freezers	Subpage	777 words; FAQ present
/plumbing/service-repair-installation	Subpage	788 words; FAQ present
/plumbing/water-heaters	Subpage	757 words; FAQ present
/plumbing/sinks-basins	Subpage	757 words; FAQ present
/plumbing/residential-commercial	Subpage	750 words; FAQ present
/electrical/repair-installation	Subpage	790 words; FAQ present
/electrical/commercial-residential	Subpage	774 words; FAQ present
/blog/spring-hvac-maintenance-checklist	Blog post	862 words; og:image → localhost (broken); title 94 chars
/blog/seasonal-home-maintenance-maryland-virginia	Blog post	732 words; og:image → localhost; title 92 chars
/blog/signs-ac-needs-repair	Blog post	847 words; og:image → localhost; title 85 chars
/blog/professional-vs-diy-drain-cleaning	Blog post	734 words; og:image → localhost; title 96 chars
/blog/electrical-safety-tips-homeowners	Blog post	736 words; og:image → localhost; title 93 chars
/blog/plumbing-problems-never-ignore	Blog post	798 words; og:image → localhost; title 92 chars
/blog/water-heater-maintenance-guide	Blog post	731 words; og:image → localhost; title 86 chars
/blog/prepare-heating-system-winter	Blog post	789 words; og:image → localhost; title 94 chars
/blog/when-upgrade-electrical-panel	Blog post	728 words; question-format title (great for AEO)
/blog/energy-efficiency-upgrades-pay-off	Blog post	727 words; og:image → localhost; title 100 chars

SEO Analysis

Score: 6/10

Technical On-Page

Signal	Finding	Status
Title tags	Unique on all 30 pages, keyword + locality targeted (e.g. "HVAC Services Maven Home Services"). Core pages 26–65 chars — ideal. All 10 blog titles run 85–100 chars and will be truncated in search results.	Needs Attention
Meta descriptions	Present and unique on every page, well written with locality keywords. Six exceed the ~160-char display limit: spring HVAC checklist (195), contact (188), water heater guide (184), AC repair signs (183), plumbing (181), commercial (178).	Needs Attention
Heading hierarchy	Exactly one H1 per page across all 30 pages, each keyword-rich (e.g. "Professional HVAC Services in Maryland & Virginia"). Logical H2/H3 structure throughout.	Good
URL structure	Clean, readable, hyphenated, keyword-bearing (/hvac/furnace-heating, /blog/signs-ac-needs-repair). No parameters or stop-word clutter.	Good
Canonical tags	No canonical link on any page. Risk of duplicate-URL indexing (www/non-www, trailing variants) and weaker consolidation of ranking signals.	Missing
robots.txt	Returns 404. Crawlers receive no directives and no sitemap pointer. In Next.js App Router this is a single app/robots.ts file.	Missing
XML sitemap	sitemap.xml returns 404. None of the 30 URLs are declared to search engines. Add app/sitemap.ts.	Missing
Robots meta	No robots meta tag — pages default to index,follow, which is correct here. No accidental noindex found.	Good
Viewport meta	Present on all pages (width=device-width, initial-scale=1); lang="en" set on <html>.	Good
Image alt text	Homepage (15), About (12), Contact (7): 100% alt coverage. Service pages: 7 of 8. Blog index: only 7 of 17 have alt. Blog posts: 8 of 11.	Needs Attention
Open Graph / Twitter	Only blog posts have og/twitter: tags — and their og:image points to http://localhost:3000/... (metadataBase not set), so shares render without an image. All other 20 pages have no social tags at all.	Missing
Internal links	Strong: mega-menu navigation with anchor links to every service, footer service/company links, and contextual in-body links with descriptive anchor text.	Good

Content Quality

Signal	Finding	Status
Word count	Category pages are genuinely deep: HVAC 2,055 / Plumbing 1,947 / Electrical 1,931 / Commercial 1,151 words. Subpages average ~770. Blog posts run 727–862 words — thin for pillar content targeting competitive queries (aim for 1,200+).	Needs Attention
Keyword & locality signals	“Maryland”, “Northern Virginia”, “Rockville” and 19 named service cities appear naturally throughout titles, H1s and body copy. Topic focus is unambiguous on every page.	Good
Content freshness	Blog posts show publication dates and read times (e.g. “March 15, 2026 · 8 min read”). No author bylines anywhere on the site.	Needs Attention
Readability	Content is scannable: short paragraphs, cards, bulleted benefit lists, step-by-step “How It Works” sections, FAQ accordions.	Good

Structured Data

Signal	Finding	Status
Schema markup (JSON-LD)	Zero structured data anywhere on the site — confirmed both in fetched HTML of all 30 pages and in the codebase (no application/ld+json). No LocalBusiness, Organization, Article, FAQPage, or BreadcrumbList.	Missing
Schema opportunity	FAQ content already exists as structured {question, answer} data in lib/services/*.ts and renders on every service page — FAQPage markup is nearly free to add.	Missing

Not assessable from HTML fetch: *Core Web Vitals and page speed (run pagespeed.web.dev), backlink profile and domain authority (Ahrefs/Semrush), and Google Business Profile status.*

GEO Analysis

Score: 5/10

E-E-A-T Assessment

Signal	Finding	Status
Author information	No named authors on any blog post; no individuals named anywhere on the site.	Missing
About page	Exists at /about (638 words): explains founding belief, Rockville HQ, service area, values. But no founder, technicians, or credentials of actual people — the strongest E-E-A-T signal is absent.	Needs Attention

Signal	Finding	Status
Contact information	Full NAP consistent site-wide: Suite 470, 9200 Corporate Blvd, Rockville, MD 20850; 877-MAVEN-11; service@mavenhomeservices.com; business hours listed.	Good
Trust signals	Five certification badges rendered site-wide (MHIC Licensed, MD General Contractor, EPA 608, OSHA, Haag Certified Inspector); testimonials section on homepage; veterans/military/first-responder discount.	Good
Organization schema	No Organization or LocalBusiness JSON-LD — the brand entity is never declared to machines despite strong on-page NAP data.	Missing

Content for AI Synthesis

Signal	Finding	Status
Clear claims up top	Every page states its value proposition plainly in the H1/hero (“Reliable HVAC, Plumbing & Electrical Services for Maryland & Northern Virginia”).	Good
Factual density	Good regional specifics (Mid-Atlantic climate stress, hard-water experience, 30-mile radius, founded 2008) but no statistics, pricing data, or original research an AI engine would prefer to cite.	Needs Attention
Source citation	Blog posts cite no external authoritative sources (e.g. ENERGY STAR, EPA, NFPA) — a missed credibility signal for AI synthesis.	Missing
Entity clarity	“Maven Home Services” is used consistently everywhere. However the site domain (mavendmv.com) and email domain (mavenhomeservices.com) differ, which dilutes the entity graph AI engines build.	Needs Attention
Comprehensiveness	Service categories cover their topic thoroughly (every HVAC/plumbing/electrical sub-service has its own section + FAQ). Blog posts answer their core question but stop short of exhaustive coverage.	Good

Technical GEO

Signal	Finding	Status
HTTPS	Site served over HTTPS.	Good
Server-rendered content	Next.js server-renders full content — headings, copy, and FAQ answers are all present in raw HTML without JavaScript, which is exactly what AI crawlers need.	Good

Signal	Finding	Status
Crawlability	No robots.txt blocks (nothing is disallowed) — but also no sitemap for AI crawlers to discover the 30 URLs, and no canonical signals.	Needs Attention
sameAs / social profiles	No social profile links anywhere on the site (no Facebook, Instagram, LinkedIn, YouTube, Yelp, or Google profile links) — the entity graph has no corroborating nodes.	Missing

AEO Analysis

Score: 6/10

Featured Snippet Eligibility

Signal	Finding	Status
Direct answer paragraphs	FAQ answers are concise and self-contained; blog intros lead with the answer (e.g. “Warm air, weak airflow, and rising energy bills are common AC repair warning signs”).	Good
Definition patterns	Few explicit “X is...” definition sentences; service pages describe benefits more than they define terms.	Needs Attention
List content	Abundant: numbered how-it-works steps, maintenance checklists, “7 Warning Signs” and “5 Plumbing Problems” listicles — strong list-snippet candidates.	Good
Table content	No comparison tables found anywhere (e.g. tank vs tankless, repair vs replace) — an open table-snippet opportunity.	Needs Attention

Structured Answer Formats

Signal	Finding	Status
FAQ schema	Real FAQ accordions with genuine Q&A on all 4 category pages, all 12 subpages, and the contact page — but zero FAQPage JSON-LD, so none of it is eligible for rich results.	Missing
HowTo schema	Step-by-step content exists (4-step service process, seasonal maintenance checklists) but carries no HowTo markup.	Missing
Question-phrased headings	Strong: FAQ questions (“How often should I schedule HVAC maintenance?”, “What qualifies as a plumbing emergency?”) and question-format blog titles (“When Should You Upgrade Your Electrical Panel...?”).	Good
Speakable schema	Not present (rarely implemented industry-wide; low priority).	Needs Attention

Voice Search Readiness

Signal	Finding	Status
Conversational language	Copy addresses the homeowner directly in natural language — well suited to voice queries.	Good
Long-tail question coverage	The 10 blog posts map cleanly to real long-tail questions (when to upgrade a panel, professional vs DIY drain cleaning, winter heating prep).	Good
Local signals	Excellent: full NAP, business hours, emergency line, 19 named service cities, 30-mile radius statement, map embed on contact page.	Good

Priority Recommendations

Priority	Issue	Dimension	Effort	Impact
Critical	Set metadataBase in app/layout.tsx — blog og:image URLs currently point to http://localhost:3000 and social shares render with no image	SEO / GEO	Low	High
Critical	Add app/sitemap.ts and app/robots.ts — both currently 404, so engines have no crawl map of the 30 pages	SEO	Low	High
High	Add LocalBusiness (or HVACBusiness/Plumber/Electrician) + Organization JSON-LD site-wide using the NAP data already in lib/site.ts	GEO / SEO	Medium	High
High	Add FAQPage JSON-LD to service pages — the {question, answer} data already exists in lib/services/*.ts	AEO	Low	High
High	Add Article schema, author bylines, and a named author bio to all 10 blog posts	GEO	Medium	Medium
Medium	Add Open Graph/Twitter tags and canonical URLs to the 20 non-blog pages (one openGraph block in each metadata export)	SEO	Low	Medium
Medium	Shorten blog titles to ≤60 chars and trim the 6 meta descriptions over 160 chars	SEO	Low	Medium
Medium	Fix missing alt text: 10 images on /blog index, 3 per blog post, 1 per service page	SEO	Low	Medium
Medium	Deepen blog posts toward 1,200+ words with a 40–60-word direct-answer paragraph under a question H2, and cite authoritative sources (ENERGY STAR, EPA)	AEO / GEO	Medium	Medium
Quick Win	Name the founder/lead technicians on /about with credentials and photos	GEO	Low	Medium
Quick Win	Create/link social + Google Business profiles in the footer to build the entity graph (sameAs targets)	GEO	Low	Medium

Priority	Issue	Dimension	Effort	Impact
Quick Win	Add a comparison table to one or two posts (tank vs tankless, repair vs replace) for table-snippet eligibility	AEO	Low	Low

What's Working Well

Unique metadata on every page	All 30 pages have distinct, well-written, locality-targeted titles and descriptions — no duplicates found.
Disciplined heading structure	Exactly one keyword-rich H1 per page across the entire site; logical H2/H3 hierarchy everywhere.
Deep service content	HVAC (2,055 words), Plumbing (1,947), Electrical (1,931) category pages each cover every sub-service with its own section, benefits, and FAQ.
FAQ sections site-wide	Genuine question/answer accordions on all 17 service pages + contact — the raw material for rich results is already written.
Server-rendered HTML	Full content, including FAQ answers, is present in raw HTML — ideal for both classic and AI crawlers.
Strong local trust package	Consistent NAP, business hours, emergency line, 5 certification badges, veterans discount, 19 named service cities, financing options.
Blog aligned to real questions	10 posts with dates and read times, targeting genuine long-tail homeowner queries in question/listicle formats.
Clean information architecture	Category → subcategory URL tree with anchor-linked service sections and a mega-menu that exposes everything to crawlers.

Glossary

SEO — Search Engine Optimization

Making a site easy for search engines like Google and Bing to crawl, understand, and rank: titles, descriptions, headings, content quality, sitemaps, and structured data.

GEO — Generative Engine Optimization

Optimizing for AI-powered search (ChatGPT Search, Perplexity, Google AI Overviews, Gemini). These engines synthesize answers and cite sources; they reward clear entity signals, named expertise, factual density, and machine-readable brand data.

AEO — Answer Engine Optimization

Optimizing for featured snippets, People-Also-Ask boxes, and voice assistants — formats that need a direct, concise answer: FAQ/HowTo markup, question headings, 40–60-word answer paragraphs, lists, and tables.
